## **Abstract**

Process for making a pharmaceutical composition, comprising: a compound of formula (1) in crystalline form:

$$\begin{array}{c} \text{CH}_3 & \begin{array}{c} \\ \\ \end{array} & \begin{array}$$

together with a pharmaceutically acceptable carrier or excipient,

wherein the compound of formula (1) is present in polymorphic crystal form A substantially free of other polymorphs, and methods for making this polymorph.
